

As a child I didn't think much of the benefits or shortfalls of our health care system. I was raised in a very healthy manner and I've been lucky to have received chiropractic care since I was nine years old. We saw a chiropractor regularly throughout my youth and he was our primary doctor in most cases.

I'm aware that the political system changes repeatedly but the problem most Canadians have been concerned with for years is the failure of our health care regardless of which party is in power. I'm most aware of this now that I am a health care professional myself and I see the inequities in what is supposed to be a "universal" system. Even though I am a practicing chiropractor, I have had a great eye opening experience in reading Squandering Billions. It illuminates many of the problems in our system that I was not aware of and reinforces those that I experience directly.

This book was very well researched, well written, and it provides some pretty obvious solutions to at least some of our problems. I just hope that the people with the power and authority to make the necessary changes will step up and make them happen!
